

Description and Use

Spring Mist is a deodorant cleaner with an exceptionally long lasting fragrance. While not over powering, the perfume in Spring Mist is often still apparent 24 hours after washing the area.

Features and Benefits

Spring Mist contains high levels of a complex floral fragrance. The high levels combined with the retentive nature of the fragrance leaves a lingering freshness many hours after cleaning.

Spring Mist is a neutral pH cleaner with non-ionic surfactants for cleaning without excessive suds. It can be used safely on any washable surface.

How to Use

Spring Mist can be used on all washable surfaces where light to medium duty cleaning is required, plus a long lasting deodorant effect.

It is ideal for hotels, motels, hospitals and aged care facilities. Use at about 1:40 (½ cup per 5 litres water) for medium duty cleaning, up to 1:100 for light duty cleaning.

Spring Mist can be used for cleaning in areas where quaternary ammonium disinfectants are used, as they are both compatible.

It can also be used as an air freshener. Dilute to about 1:20 and spray, using a trigger spray.

Technical Data

Spring Mist is an aqueous solution containing a blend of biodegradable non-ionic surfactants and fragrances. It is neutral with a pH of 7.
