

Description and Use

Top quality heavy duty powder cleaner. 100% active product. A blend of grease cutting and water softening alkalis and biodegradable surfactants. For use in workshops, food preparation areas and general cleaning.

Features and Benefits

Being a 100% active powder means PX22 is very economical. For general cleaning of vinyl floors only 30g is needed per 5 litres water.

PX22 is a strong cleaner combining alkaline builders with a blend of detergents. It cuts through heavy grease and fat deposits with ease.

PX22 is approved by AQIS as a General Cleaner Type A suitable for use in all areas of meatworks.

How to Use

PX22 has two main areas of use. In garages and workshops it is used to remove oil and grease off floors and equipment. In abattoirs, butchers and food processing areas it is used to remove fat, blood and general soiling off floors and equipment.

The normal use dilution is 60g (¼ cup) per 5 litres water. PX22 works best in warm to hot water, especially if a lot of fatty soils are present.

If soiling is very heavy, wet surface first, sprinkle PX22 on, then scrub in. This will give an abrasive action as well as the normal cleaning power of PX22.

PX22 can also be used to clean vinyl floors, linoleum etc of general soiling. Use at rate of 30g (1/8 cup) per 5 litres water.

Food contact surfaces must be rinsed with potable water after cleaning.

Technical Details

PX22 is a blend of grease cutting and water softening alkalis with biodegradable surfactants. Use solutions are alkaline with a pH in the range 11-12.5.

Safety

Wear chemical resistant gloves and goggles when handling neat product or strong solutions.
